HARSH AKAR

Application Security | VAPT | Penetration Testing

harshakar.official@gmail.com +91 8306906904 HARSH AKAR Noida

Harsh Akar Portfolio

SUMMARY

Cybersecurity professional with hands-on experience in web application, API, Android, and network penetration testing, vulnerability assessment, security research, and technical reporting. Experienced in identifying and validating security vulnerabilities, assessing business impact, and providing actionable remediation recommendations. Skilled in manual security testing, attack-surface analysis, security testing tools, and vulnerability triage. Expanding expertise in SIEM monitoring, Wazuh detection engineering, and AI application security, including prompt injection and LLM security testing.

EXPERIENCE

Security Engineer 02/2026 – Present | Noida

SDET Tech

- Conduct web application, API, Android, and network security assessments to identify and validate exploitable vulnerabilities.
- Perform manual security testing of authentication, authorization, session management, input validation, and business logic controls.
- Analyze findings, assess technical and business impact, assign severity, and prepare remediation-focused security reports.
- Collaborate with engineering teams to validate vulnerabilities, communicate remediation guidance, and perform retesting.
- Integrate security testing into development and assessment workflows, where applicable.

Information Security Engineer (L-2) 02/2025 – 02/2026 | Delhi

Codec Networks

- Executed penetration testing and vulnerability assessments across web applications, APIs, Android applications, and network environments.
- Used manual testing and security tools to identify, validate, and document security weaknesses.
- Developed technical reports containing reproduction steps, risk assessments, evidence, and remediation recommendations.
- Supported security testing methodology improvements and communicated findings to relevant stakeholders.

Security Intern 01/2025 – 02/2025 | Remote

Internship at Retracelabs.io

- Assisted with malware analysis of infected systems to investigate suspicious files and potentially malicious behavior.
- Conducted web application security testing and documented identified vulnerabilities.

Bugcrowd, Security Researcher 10/2022 – 12/2024 | Remote

Freelance security researcher focusing on vulnerability reporting

- Performed security research and penetration testing for the listed client engagements, including Smugglerz Inc. and Eazyrides.
- Used tools such as Burp Suite and Nmap to investigate potential security weaknesses.
- Documented vulnerability evidence and submitted findings with impact assessments and remediation guidance

CERTIFICATIONS AND ACHIEVEMENTS

Certifications

- CompTIA Security+
- CompTIA Network+
- CompTIA Linux+
- CompTIA CySA+
- Certified Ethical Hacker (CEH)
- Quick Heal Certified Malware Analyst

CTF's

- 6th Place, Quickheal LPU CTF 2024 (Solo).
- 11th Place, N3on byte CTF 2023.
- 150th Place, Crew CTF 2023 (Solo).
- 164th Place, BDSec CTF 2023.
- 611th Place, Tenable CTF 2023 (Solo).

Hacking Profiles

- Top 2% in TryHackMe.
- 814th Global Rank HackTheBox

PROJECTS & TECHNICAL RESEARCH

Explore my cybersecurity projects, penetration testing tools, security automation scripts, and technical implementations on GitHub.
GitHub: https://github.com/Harshakar-official

TECHNICAL SKILLS

Penetration Testing & Security Tools: Burp Suite, Nmap, RustScan, Metasploit Framework, SQLmap, Ghauri, ffuf, Feroxbuster, httpx, Nuclei, Subfinder, Amass, waybackurls, Wireshark, Postman.
Web & API Security: Web Application Penetration Testing, REST API Security Testing, OWASP Top 10, OWASP API Security Top 10, Authentication & Authorization Testing, IDOR/BOLA, SQL Injection, XSS, SSRF, CSRF, JWT & OAuth Security, Business Logic Vulnerabilities, File Upload Vulnerabilities.
Mobile Application Security: JADX, MobSF, Frida, APKTool, APK-MITM, Androguard, Quark; Android Static & Dynamic Analysis, Runtime Instrumentation, OWASP MASVS.
SIEM & Security Operations: Wazuh, SIEM Monitoring, Linux & Windows Log Analysis, Custom Detection Rules, Alert Triage, Event Correlation, MITRE ATT&CK, Auditd, Syslog, Windows Event Logs.
Vulnerability Assessment & Reporting: Vulnerability Validation, CVSS-Based Risk Assessment, Proof-of-Concept Development, Remediation Guidance, Retesting, Technical Reporting.
Reverse Engineering & Malware Analysis: Ghidra, IDA, GDB, x64dbg, John the Ripper, Hashcat, Static & Dynamic Malware Analysis.
Programming & Scripting Languages: Python, Bash, Java, Kotlin, C, C++, HTML, CSS.
Operating Systems: Kali Linux, Parrot OS, Ubuntu, Windows, macOS.
Cloud Platforms: AWS, Microsoft Azure, Google Cloud Platform (GCP).
Security Concepts: Network Enumeration, Privilege Escalation, Attack Surface Analysis, Vulnerability Management, Secure SDLC, Security Testing Automation.
AI & LLM Application Security: Prompt Injection, Direct & Indirect Prompt Injection Testing, Jailbreak Testing, System Prompt Leakage, Sensitive Data Exposure, Insecure Output Handling, LLM API Security, AI Red Teaming, Prompt Engineering, LLM Application Testing.

EDUCATION

B.Tech Hons in Cybersecurity & Blockchain 08/2021 – 07/2025
Lovely Professional University (LPU)
